

Left & below: The Schubox Lite uses ATEX certified catalytic emitters, just like the Schubox, but single skin construction in galvanised panels has enabled Schubert Technical Services to cut the cost by half.

have you seen
the lite?

The winter nights are drawing in. It's getting colder, damper. And you're probably noticing that distinctive bloom creeping onto more and more of your sprayed components. There is, of course, a solution. You've known it for long enough, you've read about it in *Furniture Journal* but, even though you know it's costing you time and money to ignore it, you've not done anything about it.

For those of you on the edge of a decision, there is still time. Just.

You see, having saturated the British market with his drying solution, the inventor of the Schubox (that amazing piece of kit that shortens drying time from hours to just a few minutes by using infra-red catalytic convertors) has turned his attentions - and his production - towards overseas buyers. They have been flocking in droves from the wettest corners of the globe, eager to secure Schubox production for their factories. Already there are Schuboxes in Bulgaria, the Czech Republic, Spain, Poland, Norway, Holland, Belgium, Denmark and the list is growing. And as they secure production slots, your chances of getting a Schubox diminish.

Time to act perhaps?

There's an added incentive:

Shown for the very first time at ASFI was Schubox Lite, a no frills version of the Schubox which, says its inventor, Peter Schubert, uses catalytic emitters that are ATEX certified and an identical gas train and control panel to big brother. The difference is, the Schubox Lite is half the price of a Schubox.

How has he done it?

"We've taken away features which don't affect the output of the catalyst or the safety of the operation," explains Peter. "The body is not double skinned, insulated or stainless steel like the Schubox. Construction is from single skinned, heavy duty galvanised panelling and that's less expensive."

Bridging the gap between the portable Schushine and the all-singing-all-dancing Schubox, Schubox Lite should appeal to those who know they've got problems with drying, don't want six or eight hour drying cycle and have so far resisted forking out for a full-blown Schubox.

If that's you, don't delay. Schubox Lites are also being snapped up fast.

Tel: 01226 360900.

Now there's absolutely no excuse for 'bloom' as the winter sets in.

Peter Schubert.
